

LUMINOSITY GLITTER ALLERGEN INFORMATION

Bioglitter™: Eco-Friendly and Safe for All

Bioglitter™ is designed to biodegrade in natural environments like fields or streams where microbes are present. These microbes consume the Bioglitter™, transforming it into harmless substances—biomass, water, and carbon dioxide. Proven to biodegrade within weeks, Bioglitter™ is a sustainable choice for eco-conscious sparkle lovers.

Our glitter is:

- Cosmetic grade – safe for use on your face, body, hair, nails, and even in crafts.
- Suitable for children aged 3 and up.
- Cruelty-free – never tested on animals or unicorns.
- Free from the 14 common food allergens, which include:
 - Celery, cereals containing gluten (e.g., wheat, barley, oats), crustaceans (e.g., prawns, crabs, lobsters), eggs, fish, lupin, milk, molluscs (e.g., mussels, oysters), mustard, peanuts, sesame, soybeans, sulphur dioxide/sulphites (above 10ppm), and tree nuts (e.g., almonds, hazelnuts, walnuts, cashews, pecans, pistachios, macadamia nuts).

Important Note: Similar to face paints, darker shades of Bioglitter™ (like blue and green) may leave temporary colour transfer on the skin. If this happens, it can be easily removed using an oil-based makeup remover or mild soap and water.
